WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Reports (Form 86ab) rendered weekly to the Office of the Surgeon General by every hospital and separate dispensary in the continental United States.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general, shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is promptly requested and the fact that they have been so questioned is indicated by the symbol (!)

MORBIDITY DATA

In this report admission rates are shown for all causes (disease, injury and battle casualty) combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparison with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per 1000 mean strength which would occur over a year's time if the current week's experience continued through the year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. Appended is a list of cases of the rarer communicable and certain other diseases.

The number of patients remaining in hospital at the end of the week per 1000 strength, as given in this report, furnishes an approximation to the current non-effective rate.

HOSPITALIZATION DATA

Current hospitalization conditions are presented in terms of bed capacity (normal and total), beds occupied and beds "available vacant". The number of beds "available vacant" is defined as 80% of the total bed capacity less the corresponding beds occupied. The number of beds "available vacant" for each Service Command is the total of the beds "available vacant" for those stations only in which 80% of the total bed capacity exceeds the beds occupied. Beds in dispensaries, convalescent facilities, venereal disease facilities and college training detachments are not included in this report.

In the case of general hospitals there are shown, in addition, the total number of patients admitted and disposed of each week, the number of patients admitted by transfer, the number of battle casualties admitted and disposed of and the total vacant beds, which is merely the excess of the total bed capacity over beds occupied.

EXPLANATORY MATTER

In reading the detail tables, it should be borne in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (!) has been placed after admission rates computed on the basis of 5 or few cases.

The symbol # has been placed after the names of stations (or groups of stations) where part or all of the data for the current week have not been received and the latest available figures have been substituted therefor.

WEEKLY HEALTH REPORT

WEEK ENDING 9 OCTOBER 1943

COMMENT ON CURRENT TRENDS

CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATES AS A WHOLE

As indicated in the chart on page 3, the admission rate from all causes for the week ending 9 October rose slightly for the second consecutive week to a figure about 9 percent higher than that for the corresponding week last year. Nevertheless it can be said that in recent weeks morbidity from all causes has been at a relatively low level.

The current week's admission rate from all diseases combined also increased slightly above the preceding week's; the preceding week, however, registered the lowest admission rate from all diseases combined in 1943 to-date. In recent weeks the admission rate from all diseases combined has been at a relatively low level, somewhat higher than that prevailing during the corresponding period of 1942.

The admission rate from colds, influenza, etc. continued on its seasonal upward trend but is running about 35% lower than in the early fall of 1942.

VARIATIONS IN MORBIDITY BY SERVICE COMMANDS

There has been relatively little change during the past few months in the level of admission rates from all causes and from all diseases combined in the First, Second, Third, and Ninth Service Commands. In the Fourth, Fifth, Sixth, and Eighth Service Commands, the admission rate from disease spurted to a temporary peak in August, chiefly due to outbreaks of diarrhea and dysentery, and then subsided to lower levels. The admission rate from all causes continues very low in the First Service Command and the Military District of Washington and relatively high in the Second, Fourth, Eighth, and Ninth Service Commands.

The admission rate from colds, influenza, etc., has recently shown a slight upward trend in the First, Second, and Eighth Service Commands.

CURRENT HOSPITALIZATION CONDITIONS

The total bed capacity (excluding emergency beds, beds in dispensaries, convalescent facilities, venereal disease facilities, and college training detachments) has been increasing steadily and on 9 October was close to the 350,000 mark. The number of beds occupied on that date was just over 190,000 and the number of "available vacant" beds over 85,000.
